## Hints & Tips - Making a coiled wire loop

Using your round nosed pliers, take your wire and form a loop round the plier barrel, cross this over and using a gentle pressure, begin to bend the shorter end of the wire against the longer length of wire.

Twist the short end of the wire round the longer end of the wire to make a coil with your flat nosed pliers.

Tighten and neaten the coil of wire.

Cut the spare wire off the coil, and neaten the finish as appropriate, by cutting flush or/and filing - your coiled loop is now ready for use.
